

Question10: Write a program to determine the season based on the month entered (e.g, Winter, Summer, Spring, etc).

```
#include <iostream>

using namespace std;

int main() {

    int month;

    cout << "Enter the month (1-12): ";

    cin >> month;

    switch (month) {

        case 12:

        case 1:

        case 2: cout << "Winter"; break;

        case 3:

        case 4:

        case 5: cout << "Spring"; break;

        case 6:

        case 7:

        case 8: cout << "Summer"; break;

        case 9:

        case 10:

        case 11: cout << "Autumn"; break;

        default: cout << "Invalid month";

    }

    return 0;

}
```
